Product Range

Product Range

Moog Servovalves and Servo-Proportional Valves are legendary for reliability and accuracy. Designed and built to meet the unique needs of the most demanding customers we offer an impressive choice of models with a range of sizes, performance characteristics and mounting options.

Why Moog Servovalves and Servo-Proportional Valves?

Over 50 years experience designing, manufacturing and supporting valve technology. Proven technology for high reliability and built-in quality for long service life.

Servovalves

Moog Servovalves function as closed-loop control devices that monitor and feed back the main stage spool position to the pilot stage either mechanically (Mechanical Feedback Valve) or electronically (Electrical Feedback Valve).

Servo-Proportional Valves

Our Servo-Proportional Valves are used as final control elements in open or closed loops which mean that their static and dynamic properties have a decisive influence on the overall characteristics of the electrohydraulic system.
